

Recognised Eco-labels for Products and Materials

a. The following table lists recognised ecolabels in Green Star.
 b. Products and Materials for which Eco-labels are an accepted method of compliance are listed across the top row.
 c. Only certificates of final products and materials are recognised in Green Star. Should project teams wish to use a component certificate to demonstrate compliance, a Technical Question needs to be submitted to justify why final product certificates cannot be provided and how component certificates could be used to show that the aim of the credit can be met. Any joinery, cabinetry, shelving or in-built furniture that needs to be assembled on-site can be treated as a final product although they are often perceived to be components. Therefore certificates for these products can be acceptable for compliance.
 d. Certificates from other Indoor Air Quality schemes such as GuT, AgBB and GreenGuard etc may be used to demonstrate compliance if they are referenced as part of the recognized eco-labels listed below.
 e. If a cell is left empty/white, this means there is currently no recognised component eco-label for this specification.
 f. This table is only valid for projects that have registered before December 2021.

Interior lining products are now covered by EC-32 Furniture, Fittings and Flooring. The previous three specifications including EC-32, EC-46 and EC-28 (floor coverings) have been combined and are now covered by EC-32 Furniture, Fittings and Flooring. Products certified to these standards will continue to be rewarded until the expiry date of the certification.

The GreenTag GreenRate v1.0 standard may also be used to contribute to other Green Star initiatives. This includes the 'Responsible Building Materials' credits in Green Star - Design & Air Built and Green Star - Interiors, as the PVC credit in Legacy rating books. Global GreenTag are able to conduct an audit in line with the GECA's 'Best Practice Guidelines for PVC'.

The below list of previously recognised Green Tag GreenRate standards have been superseded by newer versions. Products certified to these standards will continue to be rewarded until the expiry date of the certification.

Certification updates GECA 28-2006 Modified 2010 v1.1 and GECA 28-2010 v2 'Furniture and Fittings' have been superseded by newer versions. Products certified to these versions of the standard will continue to be rewarded until the expiry date of the certification.

GECA Furniture & Fittings Standard FFv3-2017 and GECA Furniture, Fittings and Mattresses Standard FFMv3.0-2017 certification is applicable to furniture, flooring and assemblies and contributes to the following Green Star credit: Innovation: 306 Global Sustainability - LEED credit: Social Equity within the Supply Chain.
